Extensions to Object

is_a?

now takes multiple arguments
```
>> "foo".is_a?(String, Symbol)    => true
>> :foo.is_a?(String, Symbol)     => true
>> 1.is_a?(String, Symbol)        => false
```

._?.

only calls the method if the receiver is not `nil`.
```
>> "foo"._?.length
=> 3
>> nil._?.length
=> nil
```

Object#try

"`.try`" only calls the method if the receiver responds to that method.
```
>> "foo".try.length
=> 3
>> :foo.try.length
=> nil
```

shorthand DryML

<a:name/> is a shorthand for <a field="name"/>
<input:name/> is a shorthand (afaiu) for <input field="name"/>
